

# Hospitality Situations

# (BWB) GmbH, Berlin

On the ground floor of an old industrial monument, the former Zeiss-Ikon-Werke, should go on well. 1,200 m<sup>2</sup> of workshop jobs for people with disabilities are created.

# Class and Wonder

David Trubridge kitsets add a touch of class and wonder to the spaces they occupy. Once installed it is often hard to imagine these spaces without the iconic pendants. They add interest, volume and a sense of captured/contained light. Bulb selection can offer different lighting effects from soft shadows to crisp overlapping ones.

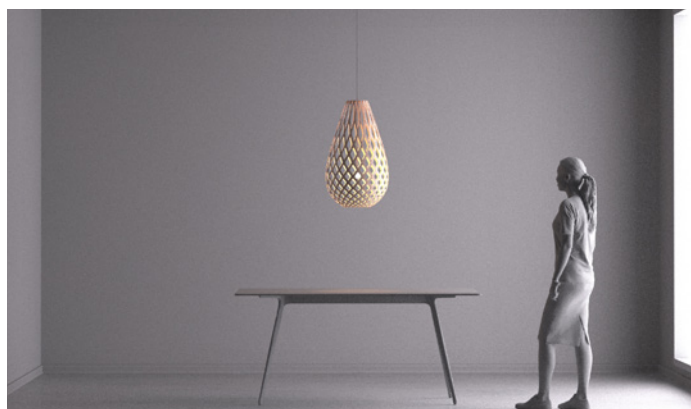

# Any Space, any Size.

David Trubridge lights come  
in a vast range of sizes and  
finishes, making them ideal  
for any project.

500mm (20")

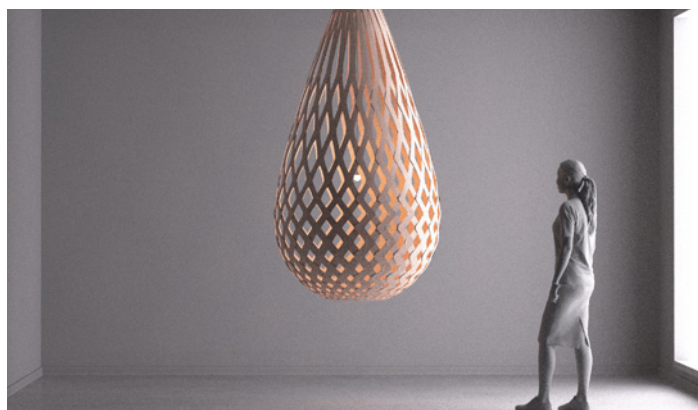

750mm (29")

1000mm (39")

1600mm (63")

2000mm (79")

2400mm (94")

# Delineation of Space

Way-finding within commercial spaces is always a concern as corridors meet receptions which connect to lounges or dining spaces. We've found the Trubridge lights effective in delineating where meeting points are, or spaces for reflection. People are drawn to them from afar thus they are perfect lights for meeting areas, receptions or lobbies.

# Transforming the Void

Seen here are Floral lights positioned over each dining recess. They give a special prominence to each setting and give a fairly repetitive interior some life.

# Form by Day

# Mood by Night

# TOW Shopping Center, Sweden

A large grouping of David Trubridge lights are seen in the TOW shopping center in Sweden. The design selections and colour were kept to a few variations to aide in the overall feel of simplicity and structure.

# On site assembly

Seed System is a design philosophy we developed that minimizes the effects of shipping on the environment. This means thinking with this in mind right from design conception through to production, packaging and the consumer experience. Being kitset means freight to destination is far cheaper than lights of the same size. It also means lights be pre-built and assembled on-site for a streamlined instal day.

# Structure

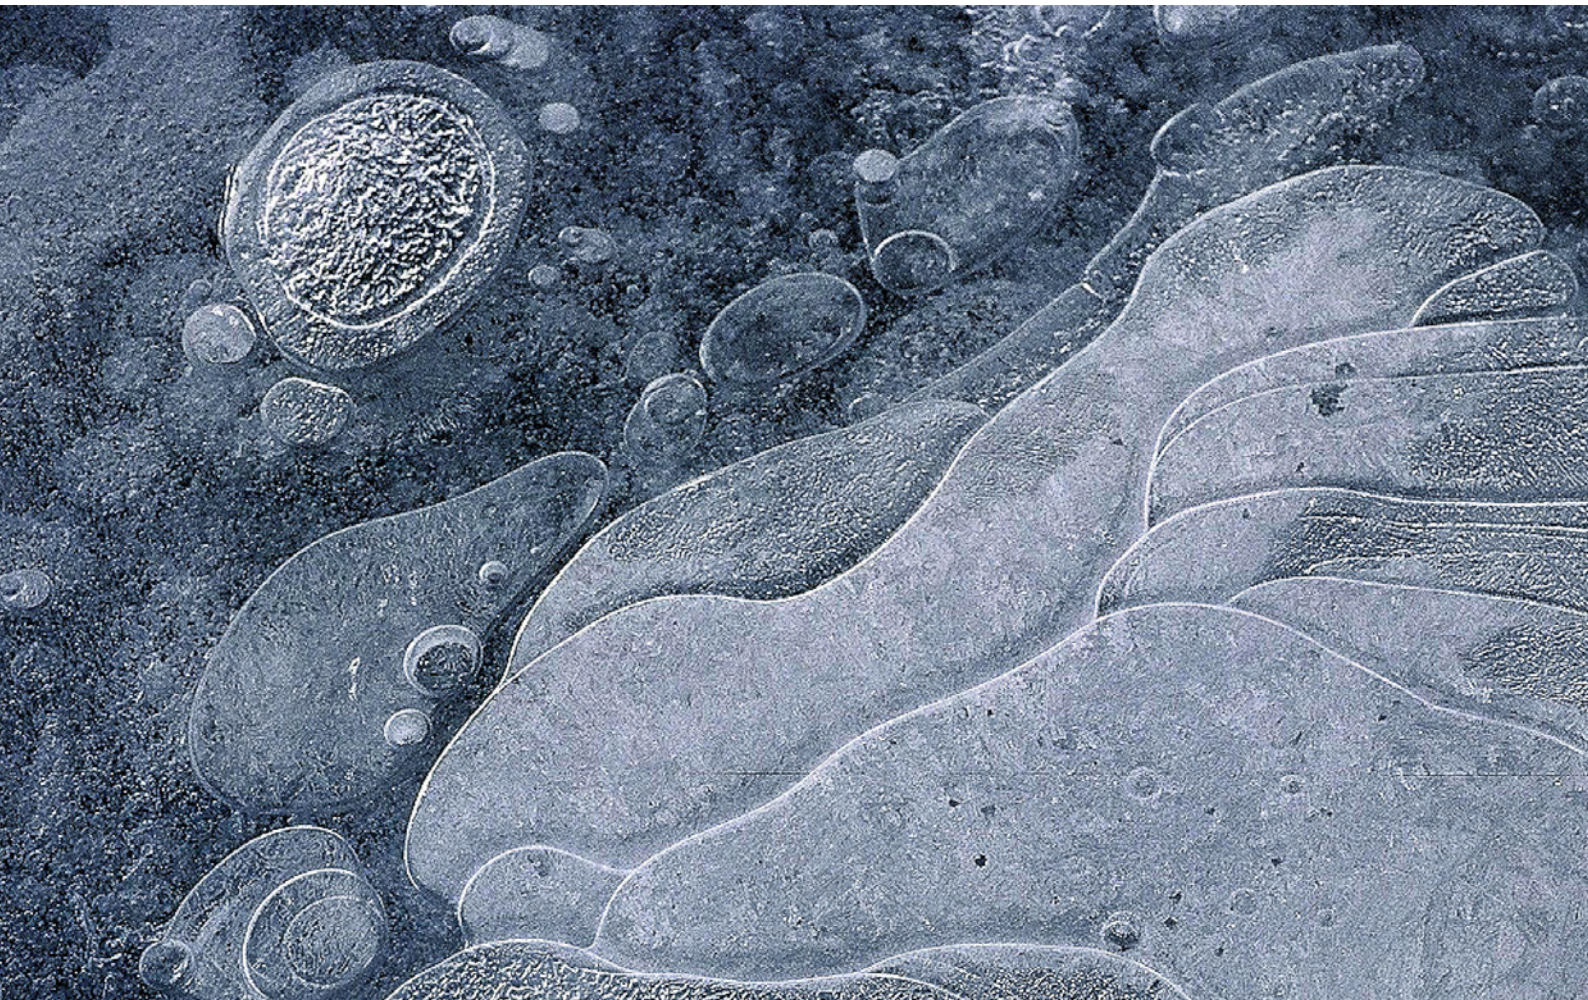

David Trubridge lights are made from bamboo plywood which is exclusively made for David Trubridge. The light is comprised of two simple shapes once assembled make a strong external skin. The 1600mm version is hung via stainless steel cables supplied with high end ceiling adjusters for easy leveling and installation. Choose a E27/26 edision screw lamp that syncs with the rest of your lighting scheme.

1600mm (63")

**"I learned about the lights and David Trubridge from a lecture he gave in San Francisco. He told his incredible story of his life on a boat and how it changed his perception of material things. His dedication to the simplicity, beauty and form of these light fixtures was mesmerizing to me. His ideology seemed to really align with Damon's vision and dreams for the space and when I first met Damon, I thought of the lights and how perfect they could be. They sort of set the tone for the rest of the design."**

**Hannah Collins - Designer**
